## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Yon et al.

Yon et al. teaches a method and system for selecting product colors. Specifically, the Yon et al. teaches a color database (matchable color database) for a product (column 2; lines 30-31). In addition, the host computer provides an interface that permits the purchaser to interact with the host computer system. The interface includes an output portion and an input portion. The output portion conveys information from the host computer system and the input portion is used to convey information to the host computer system (column 2; lines 56-67). Examiner notes that this related to the conditions-designating processing unit.

Yon et al. further teaches that once the host computer revives color information from the user, a search of the color database of available colors for the product commences (column 4; lines 26-28). Examiner notes that this represents the color data transmitting unit.

Yon et al. also teaches an indexing tool which is a spectrum of colors transmitted from the host computer to the purchaser computer for display (column 6; lines 20-24). Examiner notes that the spectrum represents Applicant's gamut. Yon et al. also teaches a virtual color table

Art Unit: 3627

where the background is the target color and the "n" closest are swatches (column 5; lines25-27). Examiner notes that this represents Applicant's virtual item coloring process unit.

Yon et al. further teaches that the system is capable of determining whether a vendor has a product in the target color or a color close enough to the target color (column 3; lines15-20). Examiner note that this represents available stock confirming unit.

Yon et al. also teaches that the host computer includes an order database, access control database, database server and firewall. (column 6; lines 63-67).

Examiner notes that it is inherent to the system of Yon et al. that the host computer store information related to dye, resin and pigment. One of ordinary skill in the art would recognize that these are fundamental to the coloring process and in order for the system of Yon et al. to provide colors and specifically custom colors this information must be part of the color database.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Kramer whose telephone number is (703) 305-5241. The examiner can normally be reached on Monday - Friday (8AM - 5PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Chilcot can be reached on (703) 305-4716. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
